P R O F E S S I O N A L S U M M A R Y

Self-motivated Information Technology graduate (Second Lower Class) with two internships spanning software engineering and QA engineering. Experienced in mobile application development using Flutter, CI/CD pipeline implementation, automated and manual testing, and AI chatbot evaluation. Capable in building clean-architecture mobile apps, integrating cloud authentication (Azure AD), building test automation suites with Java and Playwright, and running Jenkins pipelines for continuous test execution. Passionate about delivering quality software and continuously expanding skills across modern tools and frameworks.

W O R K E X P E R I E N C E

QA Engineering Intern
March 2026 – September 2026

Eigen Global (Sister company of Fetchseed)

Manual Testing

- Performed manual testing across Development, UAT, and Production environments, validating functionality, regression, and exploratory test scenarios.

Automation Testing

- Built and maintained automated test suites using Java and Playwright, covering UI and API test cases including pricing calculation validation for the Cooksongold e-commerce platform.
- Integrated Allure Report for test reporting, generating detailed pass/fail breakdowns and visual dashboards for stakeholder visibility.
- Configured Jenkins CI/CD pipelines to run automation test scripts as scheduled and triggered jobs, enabling continuous test execution.

API Testing

- Designed and executed API test collections using Postman and Bruno, validating request/response contracts, authentication flows, and edge cases.

AI Testing : Hotel Chatbot Project

- Performed AI-specific testing for a hotel chatbot application built on Retrieval-Augmented Generation (RAG), evaluating response accuracy, context retrieval quality, and hallucination rates.
-

Software Engineering Intern
July 2025 – March 2026

Corzent HQ

SnapClaim Mobile (Insurance Claims Management App)

- Developed a cross-platform mobile claims management application using Flutter (Dart), clean architecture, and BLoC state management, enabling employees to upload and track insurance claims.
- Integrated Microsoft Entra ID (Azure Active Directory) authentication to enforce role-based access control and secure claim submission workflows.
- Configured GitHub Actions CI/CD workflows to automate build, test, and distribution pipelines for both Android and iOS platforms.

Powour Mobile (Design System & Component Library)

- Implemented CI/CD pipelines using Codemagic and AWS, generating automated live preview URLs for WidgetBook component changes to accelerate team development workflow.
- Built reusable Flutter UI components and maintained WidgetBook documentation for the Powour design system.

P R O J E C T S

Sentiment Analysis on Aircraft Tweets *Python, NLTK, Scikit-learn*

- Built a natural language processing (NLP) sentiment classification model using text preprocessing (NLTK), TF-IDF feature extraction, and supervised learning algorithms (Naïve Bayes, Random Forest).
- Evaluated model performance with train/test split and accuracy scoring to compare algorithm effectiveness.

Skill Sharing Platform *Spring Boot, MongoDB, REST API*

- Developed a full-stack skill-sharing community platform using Spring Boot and MongoDB, supporting user posts, likes, bookmarking, and full CRUD operations on comments.
- Designed and implemented RESTful APIs with Spring Boot and used MongoDB for scalable NoSQL data management.

Wedding Management Platform *MERN Stack, Python, RoBERTa*

- Built a full-stack vendor management platform using the MERN stack (MongoDB, Express.js, React, Node.js), featuring a vendor dashboard for managing and reporting on services and a user-facing booking interface.
- Integrated an AI-powered assistant using Python and a RoBERTa language model to answer user queries from the platform's knowledge base.

TetraDrop *Kotlin, Android*

- Developed a feature-rich Tetris-inspired Android mobile game in Kotlin with smooth, responsive gameplay including free block rotation, speed control, and ghost-block placement guidance.
- Implemented a persistent score tracking system recording current and high scores across sessions.

TECHNICAL SKILLS

Languages: Python, Dart, Java, TypeScript, JavaScript, C#, C++, PHP

Databases: MySQL, MongoDB, Firebase, Supabase, Oracle

DevOps & CI/CD: GitHub Actions, Codemagic, AWS, Azure AD, Git, Jenkins, Azure Boards

Testing: Playwright, Selenium, Postman, Bruno, Allure Report, Manual Testing (Dev / UAT / Prod)

EDUCATION

B.Sc. (Hons) Information Technology – Second Lower Class *2022 – 2026*
Sri Lanka Institute of Information Technology (SLIIT)
Graduate · Ja-Ela, Sri Lanka

GCE Cambridge Advanced Level *2019 – 2021*
Lyceum International School
Computing – A · Mathematics – A* · Chemistry – A* · Physics – A

CERTIFICATIONS

AI/ML Engineering – Stage 1 – SLIIT

Version Control – Meta, Coursera

Cloud Web Application Builder – AWS
